M Antunes da Silva

Hydrogeology Consultant
Water Sommelier

BACKGROUND

Experienced in several geological research subjects and management in Portugal, Spain, Angola, Mozambique, Nigeria, United States of America, Brazil and Guiné Bissau.

Managed and coordinated several multidisciplinary prospecting projects, in collaboration with scientists and company's experts on underground water investigation and on the Natural Mineral Water health uses.

Started as a field geologist, being nowadays the manager of 12 Portuguese sites of water exploitation, for Natural Mineral Water bottling, for Natural Mineral Water SPAs, as well as Beer manufacturing.

Sustainable management of Natural Mineral Waters

Abstract

The Natural Mineral Waters are a rarity representing a tiny part of all the water of the Hydrogeological Cycle.

Their formation conditions are unique and assigning to them an unmatched purity which distinguishes them from all the others.

The set of phenomena that lead to the creation and occurrence of a Natural Mineral Water is very specific and must be detailed, in order to assure the best options in managing their exploitation and protection.

During this Seminar we will observe more closely the Natural Mineral Waters are “made” by nature and the knowledge necessary to find the best ways of using them without damaging the origins.
